

The materialdesign-icons package (0.14.15) – 07/07/2026

Cédric Pierquet

<https://github.com/marella/material-design-icons> (Source version 0.14.15)

<https://github.com/cpierquet/latex-packages/tree/main/materialdesign> (L^AT_EX package)

cpierquet – at – outlook . fr

This package provides L^AT_EX support for the Material Design Icons project :
<https://github.com/marella/material-design-icons>.

A set of 2122 free Apache-2.0 licensed high-quality SVG/PDF icons for you to use in your web projects.

To use materialdesign-icons in your document, include the package with `\usepackage{materialdesign-icons}`.
An icon can be accessed using the icon name. A list of all included icons with their respective *page* can be found at the end of this document.

The individual icons are provided as pages of a PDF and are ultimately loaded using the `\includegraphics` command from the `graphicx` package.

1 Example

```
...  
\usepackage{materialdesign}  
...  
\begin{document}  
...  
Inline\materialdesign{24mp}version,  
and colored\textcolor{red}{\materialdesign{24mp}}  
...  
\end{document}
```

Result: Inline, and colored 

2 Usage

2.1 Generic macro

```
\materialdesignicon%  
[%  
  filled=TF,outlined=TF,round=TF,sharp=TF,twotone=TF,%  
  height=..., (d)strut=...%  
]%  
<includegraphics options>{name}
```

The boolean [filled/outlined/round/sharp/twotone] activate different version of icon. And key [height=...] can be:

- **dauto** (by default): inline insertion with height/depth;
- **auto**: inline insertion with height/noddepth;
- **a length**: normal insertion with fixed height;
- **manuel height/depth**: normal insertion with fixed height/depth.

The keys [(d)strut=...] can be used to set the *reference* box for dimension calculations.

By default, icons are given with a small border, so the given height is the height of the *full* box, not the hight of the icons.

Example: Inline  version or inline  version

2.2 Examples

```
%normal version: inline with automatic height/depth (from qX characters)
\materialdesignicon[height=dauto]{24mp} %or \materialdesignicon{24mp}
```

qX

```
%normal version: inline with automatic height/depth (from specified characters)
(q\materialdesignicon[height=dauto,dstrut=(qB)]{24mp}B)
```

(qB)

```
%normal version: inline with automatic height (from X character) default version
\materialdesignicon[height=auto]{24mp}
```

XX

```
%normal version: inline with manual height/depth
\materialdesignicon[height={0.8em/-0.4em}]{24mp}
```

qbXz

```
%fixed height
\materialdesignicon[height=2in]{24mp}
```

2.3 Used packages

ifthen, calc, graphicx, xstring and simplekv are loaded and used by the package.

2.4 Bugs

For bug reports and feature requests, report on the GitHub repository <https://github.com/cpierquet/latex-packages/issues>.

3 List of icons

Icons are colored in [violet](#).

3.1 Outlined version (2122 icons)

The PDF file is `materialdesign-outlined-all.pdf`
